

St. Vincent Heart Center

Student Athlete Echo Screenings

Young athletes, while appearing healthy, should be evaluated for the potential risk of sudden death from cardiac-related abnormalities. The student athlete echo screenings provides peace-of-mind for parents by screening for the leading causes of congenital cardiovascular conditions that place student athletes at risk for sudden collapse or sudden death.

- St. Vincent Medical Group Cardiology Services will be offering student athlete echo screening on Monday, July 24, 2017, at our Medical Office Building at the St. Vincent Heart Center.
- Students entering the sixth grade in the fall of 2017 to a senior in high school are eligible for the screening.
- The screening focuses on the four leading causes of cardiovascular compromise (including sudden cardiac death) in athletes: hypertrophic cardiomyopathy, Marfan's aorta, mitral valve prolapse and aortic valve stenosis.
- The screening is non-invasive and does not represent a full 2-D echocardiography or Doppler examination.
- Results are mailed to the parents 10-14 working days after the screening.
- If screening results are abnormal, parents should seek follow up care with their child's personal physician.

**This is a limited test and does not evaluate for all potential cardiovascular conditions that could exist now or in the future, including valvular abnormalities or coronary artery disease. The examination should not replace a complete cardiovascular examination if indicated by symptoms.*

Monday July 24, 2017 • 5:00 to 8:00 pm

The screenings will be held at:
**10590 N. Meridian Street, Suite 300
Indianapolis, IN 46290**

Please call **888-338-CARE (2273)** to register. **Cost is \$20.00**
No walk ups and no money taken at the screening.
You must register.
